Coverage:

Approximately 100 square feet per roll.

Surface Preparation:

The substrate surface must be smooth enough to prevent puncturing of the buffer layer under normal roof traffic.

Application:

Application details as specified for each project must be followed as they will vary to suit project conditions. Cut the rolls into lengths suitable for application and laid flat to eliminate curl. Unless otherwise specified, this buffer layer is laid mineral side down with 2" side laps and 4" end laps and nailed to nailable decks or spot-adhered, cold or hot method, to non-nailable decks and certain insulation boards.
